Omega 3

Omega 3 are fatty acids that are essential for the body but not produced in it and must be taken from outside. First of all, it should be known that fish oil is not the same as Omega 3 fatty acids. When buying fish oil, you should prefer fish oils with high EPA and DHA content. Breast milk is also a natural source of Omega 3.

Omega 3 fatty acids are essential oils that you should get into your body.

These incredibly healthy oils have important benefits for your body and especially for your brain.

In addition to this, most people who follow a standard Western diet do not get enough Omega 3. Omega 3 fatty acids are a family of polyunsaturated fats that should be taken with nourishment. Omega 3 fatty acids are among the most extensively studied nutrients in the world. It has been shown that they have extremely important benefits for the health of various systems in the body.

COQ10

Coenzyme Q10, also known as CoQ10, is a compound that helps produce energy in cells and is stored in the cells' mitochondria. Mitochondria are responsible for producing energy in the body. It also protects cells from oxidative damage and disease-causing bacteria or viruses.

Studies have shown that CoQ10 plays several important roles in the body. One of its main functions is to help produce energy in your cells.

Coenzyme Q10 plays a role in the production of adenosinetriphosphate (ATP), which is involved in energy transfer within cells.

Another important role is to act as an antioxidant and protect cells against oxidative damage.

Excessive free radicals cause oxidative damage that can interfere with normal cell function. This is known to cause many health problems.

WARRIOR AGAINST THE EFFECTS OF AGING!

Omega 3 is a powerful fighter against the effects of aging. It is cardiovascular friendly and it has skin regenerating properties.

When coenzyme Q10 and Omega 3 come together, they protect the body naturally and minimize the effects of aging.
